

TEXTBOOK	Control Systems Engineering 6th Ed. N. S. Nise <i>John Wiley and Sons Inc., 2012</i>	Feedback Systems Electronic Ed.2.11b K. J. Astrom R. M. Murray Princeton University Press, 2012	Feedback Control of Dynamic Systems 6th Ed. G. F. Franklin J. D. Powell A. Emami-Naeini <i>Pearson Higher Education Inc., 2010</i>	Modern Control Systems 12th Ed. R. C. Dorf R. H. Bishop <i>Pearson Higher Education, 2011</i>	Modern Control Engineering 5th Ed. K. Ogata <i>Pearson Education, 2010</i>	Automatic Control Systems 9th Ed. F. Golnaraghi B. C. Kuo John Wiley and Sons, Inc., 2010	Control Systems Engineering 5th Ed. I. J. Nagrath M. Gopal <i>Anshan Ltd., and New Age International Ltd., 2008</i>	Mechatronics 3th Ed. W. Bolton <i>Pearson Education Ltd., 2003</i>
LAB EXAMPLE								
First Principles Modeling	p. 79-84 Electromechanical System Transfer Functions	p. 28-31 Modeling Concepts	p. 47-49 Modeling a DC Motor	p. 70-74 Transfer Function of the DC motor		p. 198-205 DC Motors in Control Systems	p. 135-137 DC Servomotors	p. 214-217 Electromechanical Systems – DC Motor
System Identification								
Qualitative PID Control	p. 470-477 Ideal Derivative Compensation	p. 293-298 PID Control	p. 186-191 The Three-Term Controller: PID Control	p. 480-488 PID Controllers	p. 567-569 PID Control	p. 289-293 Speed and Position Control of a DC Motor	p. 216-219 Derivative Error Compensation	p. 288-290 Derivative Control
Quantitative PID Control	p. 500-503 Minor-Loop Feedback Compensation	p. 220, 373 Gain Scheduling	p. 184-185 System Type for a DC Motor Position Control		p. 590-591 PID Control	p. 492 Design with the PID Controller	p. 477-483 Tuning of PID Controllers	p. 297-299 Control System Performance
PD Control						p. 314-316 Basic Control Systems Utilizing Addition of Poles and Zeros		p. 301-302 Velocity Control
Gain Scheduling								
State-Feedback Control	p. 663-666 Design via State Space	p. 131-134 Linear Systems	p. 413-421 State-Space Design	p. 834 The Design of State Variable Feedback Systems	p. 648 Control Systems Analysis in State Space	p. 673-676 Introduction to State Variable Analysis	p. 570-577 State Variable Analysis and Design	
	p. 123-141 The General State-Space Representation	p. 167-168 State Feedback	p. 425-426 Analysis of the State Equations	p. 166-167 The State Differential Equation	p. 648-668 Control Systems Analysis in State Space	p. 691-693 Relationship between state equations and high-order differential equations	p. 577-578 Linearization of the State Equation	
	p. 665-672 Controller Design	p. 170-172 Balance System	p. 443-445 Finding the Control Law	p. 867-869 Optimal Control Systems	p. 793-798 Quadratic Optimal Regulator Systems		p. 574-578 State Variable Analysis and Design	
LQG Design		p. 175-177 State Space Controller	p. 457-458, and p. 463-466 LQR Design			p. 51 Definition of State Variables	p. 625-630 Pole-Placement by State Feedback	
		p. 190-192 Linear Quadratic Regulators				p. 730-731 Pole-Placement Design Through State Feedback	p. 704-707 Parameter Optimization: Regulators)
